

UBI played a key role in enabling one of the top **global Healthcare & Lifesciences companies** to implement end-to-end supply chain visualization, which resulted in enhanced analytics and better-informed decision-making

Situation & Objective

- Our client faced significant latency issues caused by manual data pipeline execution and report refreshing, leading to a great deal of re-work and an extended timeline for the platform modernization project

Impact and Benefits

30% Reduction in overall effort due to reusable framework

10% Cost Savings due to reduced timeline and effort

Solution Approach

- UsefulBI designed and implemented highly resilient and efficient pipelines using Azure Data Factory and Databricks.
- The primary focus was on automating the pipeline process to reduce complexity and accelerate timelines.
- By optimizing PowerBI reports through scheduling of new pipelines, the client gained greater visibility into their data and was able to make more informed decisions.
